Issued by  
THE SMITHSONIAN INSTITUTION  
Washington, D.C., U.S.A.  
March 1980

## ACKNOWLEDGEMENT

The Atoll Research Bulletin is issued by the Smithsonian Institution, as a part of its activity in tropical biology, to place on record information on the biota of tropical islands and reefs, and on the environment that supports the biota. The Bulletin is supported by the National Museum of Natural History and is produced and distributed by the Smithsonian Press. The editing is done by members of the Museum staff and by Dr. D. R. Stoddart.

The Bulletin was founded and the first 117 numbers issued by the Pacific Science Board, National Academy of Sciences, with financial support from the Office of Naval Research. Its pages were largely devoted to reports resulting from the Pacific Science Board's Coral Atoll Program.

---

The sole responsibility for all statements made by authors of papers in the Atoll Research Bulletin rests with them, and statements made in the Bulletin do not necessarily represent the views of the Smithsonian nor those of the editors of the Bulletin.

---

## CONTENTS

1.	Scientific survey of Little Cayman D.R. Stoddart	Page 1
2.	Geology and geomorphology of Little Cayman D.R. Stoddart	11
3.	Mangrove sediments of Little Cayman C. Woodroffe	17
4.	The zonation of rocky littoral areas around Little Cayman G.W. Potts	23
5.	The littoral fishes of Little Cayman G.W. Potts	43
6.	Vegetation of Little Cayman D.R. Stoddart	53
7.	Checklist of the plants of Little Cayman G.R. Proctor	71
8.	Terrestrial fauna (excluding birds and insects) of Little Cayman M.V. Hounsome	81
9.	<i>Cerion nanus</i> (Maynard) (Mollusca: Cerionidae) on Little Cayman M.V. Hounsome and R.R. Askew	91
10.	The insect fauna of Little Cayman R.R. Askew	97
11.	The Odonata of the Cayman Islands R.R. Askew	115
12.	The butterfly (Lepidoptera, Rhopalocera) fauna of the Cayman Islands R.R. Askew	121

13.	Hawkmoths (Lepidoptera, Sphingidae) of Little Cayman	139
	R.R. Askew	
14.	Ecology and species turnover of the birds of Little Cayman	141
	A.W. Diamond	
15.	The Red-footed Booby colony on Little Cayman: size, structure and significance	165
	A.W. Diamond	
16.	Little Cayman: ecology and significance	171
	D.R. Stoddart	

## LIST OF PLATES

1. The south coast of Little Cayman, from the southeast; noon cumulus extending along the length of the island *Frontispiece*

*Following page 16*

2. Sparrowhawk Hill from the north coast beach ridge
3. Limestone ridge inland of the coastal salt pond at Charles Bight
4. Limestone ridge and coastal sand flat and salt pond at Mary's Bay
5. Dissected surface on the Bluff Limestone (6032 1783); the sides of the frame are 50 cm long
6. Detail of surface dissection on Bluff Limestone
7. Large doline in Bluff Limestone (6028 1778)
8. Cave speleothems revealed by roof collapse (6003 1781)
9. Bluff coast at East Point
10. Ironshore platform west of Calabash Spot
11. *Diploria* colonies in coastal Ironshore at Salt Rocks
12. *Strombus* shells in coastal Ironshore at Salt Rocks
13. Ironshore deposits on the landward margins of the Blossom Village lagoon
14. Potholes in the Ironshore surface at Salt Rocks
15. Bedded calcarenites overlying reef facies in the Ironshore at Salt Rocks
16. Detail of the bedded calcarenites at Salt Rocks
17. Beach ridge east of Pirate's Point
18. Beach ridge at Calabash Point

19. Sand beach ridge with juvenile *Casuarina* in Wearis Bay
20. Storm wash-over cobbles north of East Rocky Point, Blossom Bay
21. Hurricane-deposited storm blocks on the Ironshore platform south of the airstrip (5957 1737)

*Following page 42*

22. Preston Bay showing the exposed littoral rocks and sandy beach above them
23. West End Rocks with a large littoral rock pool in the foreground
24. *Echininus nodulosus* in crevices with *Littorina ziczac* on the upper midlittoral region of Preston Bay
25. *Tectarius muricatus* (arrowed) among the leaves of *Sesuvium portulacastrum* at West End Rocks
26. *Nerita peloronta* and *N. tessellata* on rocks at the midlittoral zone. *Echininus nodulosus* and *Littorina ziczac* are present in crevices
27. *Turbinaria turbinata*, *Padina sanctae-crucis* and *Dictyota* sp. in the lower midlittoral zone at West End Rocks
28. East End showing the steep and deeply dissected littoral region
29. The rubble ridge of South Hole Sound looking east. In the foreground is a small plant of the black mangrove *Avicennia germinans*
30. *Cittarium pica* on the jetty at Preston Bay
31. *Cittarium pica* covered in calcareous algae on the rubble ridge, South Hole Sound
32. *Tectarius muricatus* in large numbers in the supralittoral fringe at East End
33. *Acanthopleura granulata* in shallow rock pools in the lower midlittoral zone
34. Rock pool at West End Rocks showing *Puperita pupa* and *Littorina mespillum* scattered over the bottom of the pool

35. *Puperita pupa* gathered on a rocky pinnacle within a rock pool
36. *Diadema antillarum* in a low tide level rock pool at Preston Bay

*Following page 70*

37. Dry evergreen forest south of Sparrowhawk Hill; note the human figure in the centre of the picture (6003 1775)
38. Dry evergreen woodland inland from Jackson's Bay (5977 1768)
39. Dry evergreen thicket on Sparrowhawk Hill (6004 1780)
40. Open dry evergreen thicket on the northern slopes of Sparrowhawk Hill (6003 1781)
41. *Acrostichum aureum* in limestone solution holes north of Blossom Village (5953 1750)
42. Wind-sheared coastal hedge of *Coccoloba uvifera*, Owen Island
43. Pioneer *Hymenocallis litorea* and other herbaceous pioneers at Sandy Point
44. Decapitated coconuts on the coastal beach ridge near West Point
45. Coconut plantation with many dead trees on Owen Island
46. Low *Rhizophora* in the coastal lagoon east of Diggary's Point (6030 1773)
47. Tall *Avicennia* woodland in Tarpon Lake
48. Tall *Rhizophora* woodland in Tarpon Lake
49. Interior of tall *Rhizophora* woodland at Tarpon Lake
50. Dwarf inland *Rhizophora* in an interior depression (5975 1761)
51. Inland *Sesuvium* marsh with open pools at the east end of the island (6074 1795)

*Following page 96*

52. The site on the trans-island track north of Blossom Village where living *Cerion nanus* was found. The snails were living on shrubs of *Evolvulus arbuscula* here seen growing on the path

53. *Cerion nanus* and young *C. pannosum* on a single plant of *Evolvulus arbuscula*. Inset: a living specimen of *C. nanus*
54. Six shells of *C. nanus* with an example of *C. pannosum* for comparison (to the same scale). Four typical shells are shown together with two examples of extremes in length/height ratio

## LIST OF FIGURES

*Following page 10*

1. Location of the Cayman Islands
2. Monthly rainfall at Little Cayman

*Following page 16*

3. Topography of Little Cayman, based on the Directorate of Overseas Surveys 1:25,000 map (1965)
4. Topographic traverses A-F: for locations see Figure 3
5. Geology and habitats of Little Cayman
6. Topographic profiles at Salt Rocks
7. Beach ridge and cliffed coast profiles: for locations see Figure 3
8. Size composition of beach sediments

*Following page 22*

9. Topographic profile of inland dwarf *Rhizophora* scrub
10. Topographic profiles of A. *Rhizophora* woodland at Tarpon Lake, B. North coast salt-pond *Rhizophora* woodland near Sparrowhawk Hill

*Following page 42*

11. Map of Little Cayman showing the main coastal sampling areas
12. Graphs of the daily tidal range during the period of the expedition together with hourly tidal heights on a neap tide and a spring tide. The data were provided by Dr. K. George and based on figures obtained from *Admiralty Tide Tables*, Vol. II, 1975

13. Profile of the shore at Preston Bay with an indication of the vertical zonation of the littoral species. The inset shows how on the upper shore some species remain in pools (*Nerita versicolor*), in moist crevices (*Littorina ziczac*), and on the open rock (*Echininus nodulosus* and *Nodilittorina tuberculata*). *Littorina ziczac* refers to the appropriate species of the *L. ziczac* "complex" (Borkowski and Borkowski, 1969) found in an area, and does so in subsequent figures
14. Histograms indicating the distribution of four species of gastropod along the jetty at Preston Bay. Black columns represent the east side of the jetty and stippled columns the west side
15. Profile of the shore at West End Rocks with an indication of the vertical zonation of the common littoral species
16. Profile of the shore at Jackson's Bay Point indicating the vertical zonation of the common littoral species. The double occurrence of some littorinids and nerites is a result of their presence on a large boulder found just below MLWM
17. The distribution of molluscan zones around a boulder at Jackson's Bay Point (see Figure 16). It should be noticed that there is a difference in the extent of the zones on the seaward and landward sides of the boulder
18. Profile of the shore at the East End indicating the distribution of the common littoral species
19. Outlines and orientations of littoral rock pools at West End Rocks and Jackson's Bay. Pools A, B and C occurred at approximately mid-tide levels and D, E and F at low tide levels. A diagrammatic section X-Y of pool A is given with the distribution of some of the common rock pool invertebrates

Following page 52

20. Diagram of (a) Splash Zone and (b) Surge Zone pools with their typical inhabitants: 1. *Eucinostomus argenteus*; 2. *Bathygobius soporator*; 3. *Abudefduf saxatilis*; 4. *Lutjanus apodus*; 5. *Gerres cinereus*; 6. *Tomicodon fasciatus*; 7. *Adioryx vexillarius*; 8. *Eupomacentrus leucostictus*; 9. *Puperita pupa*; 10. *Acetabularia sanctae-crucis*; 11. *Thalassoma bifasciatum*; 12. *Diadema antillarum*; 13. *Canthigaster rostrata*; 14. *Littorina mespillum*; 15. *Echidna catenata*

Following page 70

21. Habitats and geology of Little Cayman
22. Vegetation and topography of Owen Island

Following page 90

23. Number of species (other than insects and birds) and sampling sites, Little Cayman, 1975

Following page 114

24. The progression of insect species recorded on Little Cayman by dates. Full circles signify dates on which half the final total of species in each group were found. The light trap was first operated on 14 July, the Malaise trap on 16 July, and the main central forest collections were made on 28 July

Following page 138

25. The relationship between the numbers of butterfly species and the areas (sq km on a logarithmic scale) of Cuba, Hispaniola, Puerto Rico, Jamaica, and the Cayman Islands ( $r = 0.98$ )
26. Map of Little Cayman showing localities mentioned in the text and the situation of the transects
27. Associations between the butterfly faunas of the Greater Antilles based upon mean values of Cole's Coefficient of Association. The scale represents positive values of Cole's Coefficient
28. Numbers of butterflies sighted at hourly intervals (local time) during transects on three days at Pirate's Point, Little Cayman. Shade temperatures are shown above. For each hour the columns represent (from left to right) 16, 17 and 20 July
29. The hourly activity of *Anaea echemus*, *Dione vanillae* and *Ascia monuste* at Pirate's Point, Little Cayman

Following page 164

30. Map showing location of the main habitats on Little Cayman, place names, and cut paths used as transects
31. Feeding heights of four insectivorous passerines on Little Cayman: (a) Caribbean Elaenia; (b) Bananaquit; (c) Vitelline Warbler; (d) Yellow Warbler. Ordinate: height in intervals of 2 m (Gr = ground). Abscissa: percentage of feeding observations in each height class. White areas (right of 0%): feeds on fruit (Elaenia, Vitelline Warbler) or nectar (Bananaquit, Yellow Warbler). Black areas (left of 0%): feeds on insects. For sample sizes, see Table 29

*Following page 170*

32. Outline map of Little Cayman, showing the location of the booby colony and detail of the colony area. Numerals refer to previous sites of the colony (see text). Letters represent sections of the present colony used in the census (see Table 30). Arrows represent main flight lines
33. Diurnal variation in number of boobies present in the sample area of the colony

*Following page 180*

34. Recommended marine and terrestrial conservation areas, Little Cayman

## LIST OF TABLES

1.	Rainfall records at Little Cayman. Data by courtesy of the Mosquito Research and Control Unit, Grand Cayman	Page 2
2.	Publications on insects of Little Cayman arising from the Oxford University Expedition to the Cayman Islands in 1938	5
3.	Size distribution of the common littoral Mollusca around Little Cayman	32
4.	Distribution of littoral Mollusca	36
5.	Classification of littoral fishes	45
6.	Mean size, sample size and habitat preference of the fishes found occupying six littoral rock pools	46
7.	Terrestrial fauna of Little Cayman (excluding birds and insects), July and August 1975	84
8.	Species diversity in each of the habitat types	87
9.	Numbers of living adult <i>Cerion nanus</i> and <i>Cerion pannosum</i> found on <i>Evolvulus</i> plants, and the numbers of empty shells of the two species per 0.25 sq m, at sites A and B	94
10.	Numbers of <i>Evolvulus</i> plants with and without <i>Cerion</i> of either species at sites A and B	94
11.	Numbers of <i>Evolvulus</i> plants carrying live <i>Cerion</i> of one or both species at site B. The expected figures assume a random distribution of each species	94
12.	Ordinal distribution of species of insects found on Little Cayman. Numbers of species for North America north of Mexico are from Borror and DeLong (1966)	99
13.	Within-family size ranges of Little Cayman and British insects. Dimensions are body length (excluding antennae and abdominal appendages) except for Odonata, Neuroptera and Lepidoptera where wing expanse is given, and Scarabaeidae for which elytral length is shown	101
14.	Percentage composition of sweep-net samples from Little Cayman compared with those reported by Janzen and Pond (1975) from Michigan, U.S.A.	108

15. Percentage composition of Malaise trap samples from Little Cayman, and from Surinam and Kansas (Matthews and Matthews 1971) 110
16. Comparison of light trap catches of Macrolepidoptera on Little Cayman and at Woodchester Park, Gloucestershire, England. 111
17. Numbers of species caught by different methods on Little Cayman. Figures in parentheses show the numbers of species caught only by the method indicated, and the percentages are of the numbers of species caught by each method out of the total number of species found on the island belonging to the group 113
18. Species of Odonata recorded from the Cayman Islands by the 1938 Oxford University Expedition and the 1975 Royal Society and Cayman Islands Government Expedition 116
19. Butterfly species recorded by the 1938 and 1975 Expeditions to the Cayman Islands 123
20. Matrix showing the numbers of species shared between Cuba, Hispaniola, Puerto Rico, Jamaica and the Cayman Islands (upper right), values for Cole's coefficient of association (lower left), and the total number of butterfly species recorded for each island 132
21. Numbers of butterflies counted per five minutes in each habitat zone on three transects of Little Cayman 135
22. The species of land-birds breeding in the Cayman Islands, and their distribution elsewhere 143
23. Distributional affinities of the breeding land-birds of the Cayman Islands and Little Cayman. Figures in brackets show the number of Central American species that are restricted to offshore islands 144
24. The endemic forms of Cayman Islands land-birds, and the islands on which they breed. Populations probably extinct are bracketed 145
25. Distribution of Cayman Islands endemic land-birds. Figures in brackets show totals before recent extinctions 148
26. Extinctions and colonisations in the Cayman Islands avifauna 149
27. Breeding records of Little Cayman birds, 9 July-11 August 1975 150

28. Average number of birds per hour recorded in four habitats on Little Cayman	151
29. Habitats of breeding birds of Little Cayman	152
30. Feeding methods of four insectivorous passerines on Little Cayman	154
31. Census of boobies along the southern edge of the colony, 0800-1000, 1 August 1975	167
